

Act Report

After wrangling the data, we are ready to analyze the data and translate the tables and numbers in a plain text. One good way to do so is to translate the data into Questions and Answers as following:

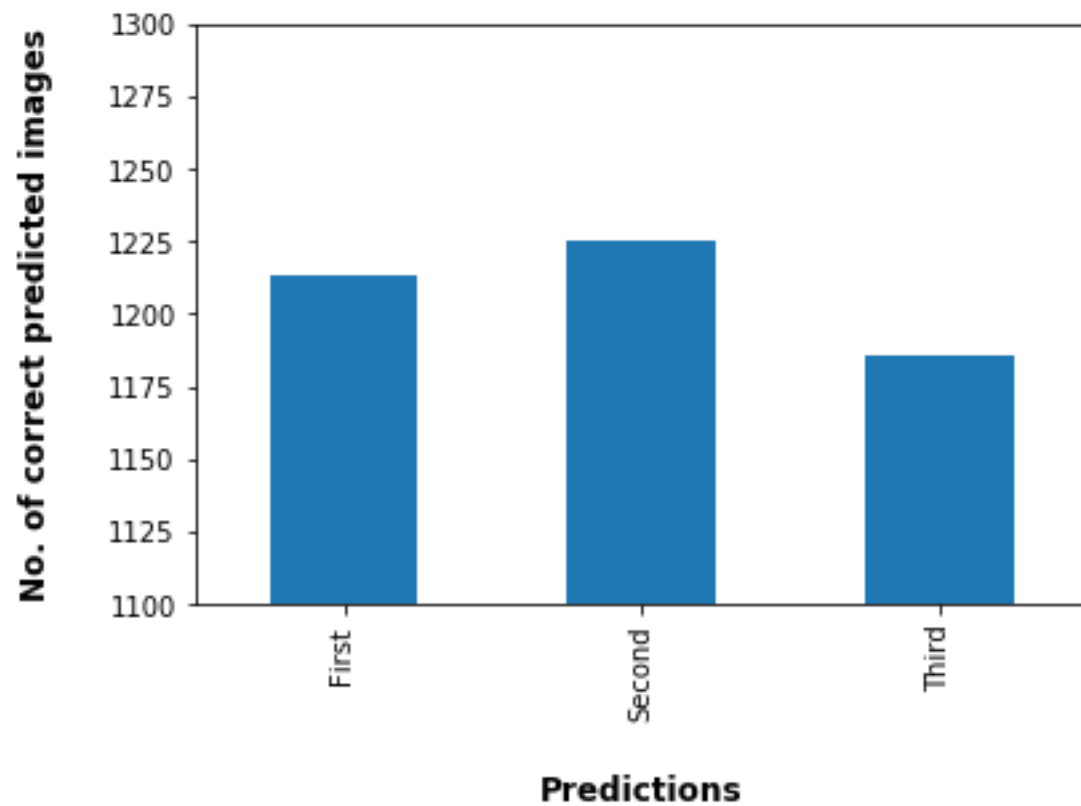

1. What is the most common dog stage in all the predicted photos?

- When we plot the data for the number of each stage with the percentage to the total of the predicted stages.

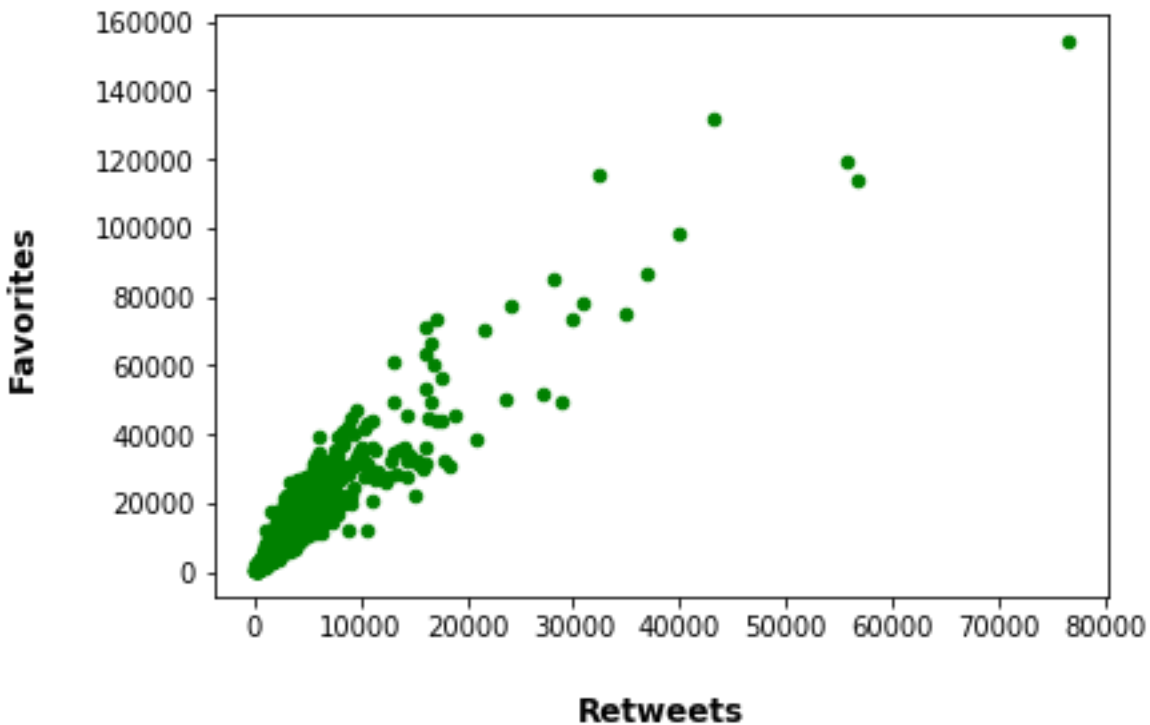

2. What is the best image prediction methods?

- When we plot the number of correctly predicted images by each of three prediction methods, we can obtain the answer clearly.

3. Does the number of retweets affect the number of favorites?

- By plotting the number of retweets to the number of favorites for each of the tweets as below,

We can clearly confirm the direct correlation between the retweets count and the favorites count.
